

Vatican conference discusses extraterrestrial life and its implications for Catholic theology

Rich Heffern | Nov. 11, 2009 NCR Today

Four hundred years after it put astronomer Galileo under house arrest for challenging the view that the Earth was the center of the universe, the Vatican has called in experts to study the possibility of extraterrestrial life and its implications, if discovered, for the Catholic church.

"The questions of life's origins and of whether life exists elsewhere in our universe are very suitable and deserve serious consideration," said Jesuit Fr. Jose Gabriel Funes, director of the Vatican Observatory. Funes presented the results Nov. 10 of a five-day conference that gathered astronomers, physicists, biologists and other experts to discuss the new field of astrobiology -- the study of the origin of life and its existence elsewhere in the universe.
