

Do Crystal Balls Work?

Michael Sean Winters | Sep. 17, 2010 Distinctly Catholic

In writing my analysis of various races around the country, I rely on several different websites, but none more so than the Cook Political Report, which has been producing prognostications for many years. Of course, a lot of "conventional wisdom" turns out not to be very wise, so I sniffed around to see if anyone had examined whether or not anyone had researched the past performance of Cook's crystal ball. [Joshua Green at The Atlantic](#) [1] had already done the math, which I am not very good at to begin with, and he shows that Cook has been right most of the time.
