

10-year-old girl discovers a supernova

Rich Heffern | Jan. 4, 2011 Eco Catholic

A 10-year-old-girl from Canada has [discovered a supernova](#) [1], making her the youngest person ever to find one of these giant stellar explosions.

The Royal Astronomical Society of Canada announced the discovery by Kathryn Aurora Gray of Fredericton, New Brunswick, (wonderful middle name!) who was assisted by astronomers Paul Gray and David Lane.
